

CAPSTAN *Rope Winch*

Powered by a lightweight gas engine or attaches to most chainsaws. Pulls up to 2,500 lbs. Excellent for pulling big game animals, boats, and winching stuck vehicles out of extreme locations.

Gas powered winches excel for long, remote pulls and you're not tied to a vehicle battery. Carry in your hand, back pack, vehicle or boat. You can pull loads long distances without overheating the motor or loss of pulling power. Rope is safer than cable if it breaks and snaps back.

The capstan type winch is unique, you're not limited to the length of cable that a drum will hold and pulling power does not decrease as the drum fills as is the case with drum type winches. You can take up slack in the winch line or play out line, by hand, without running the winch.
